

NA/NB Mechanical 4 Post Battery Disconnect Harness

PN: 0000-10-5804

1. As with all electrical work, start by disconnecting the negative battery terminal then disconnect the positive battery terminal.
2. Disconnect factory female harness from the alternator. (Pic 2)
3. Plug the male alternator plug from the Motorsports Harness into the OEM female plug you just unplugged in step 1. (Pic 2)
4. Plug the female alternator plug from the Motorsport Harness into the alternator. (Pic 2)
5. Run the harness through the firewall on the passenger side of the vehicle using the lower AC evaporator hole. (Pic. 4)
6. Install the supplied firewall grommet into the lower AC evaporator hole. (Pic 3 & 4)
7. Continue running the motorsports harness inside the vehicle along the rocker panel to the B pillar kill switch location.
8. Attach small wires with existing eyelets to the small terminals on your 4 post mechanical kill switch.
9. Reconnect battery terminals to battery and test.
